Medium Range Forecasts
Weather Outlook During 2 – 8 May 2026

Weather Forecast: During 2 – 3 and 6 – 8 May 2026, less rains in the upper country with hot weather because the high-pressure system from China which cover the Northeast of Thailand and the South China Sea is weakening. The southwesterly and southeasterly winds prevail over the upper country while hot to very hot weather occurs.

During 4 – 5 May 2026, more rains in the upper country with gusty winds in some areas while hot weather will persist because the another high-pressure system from China will extend to cover the South China Sea and causing the southeasterly wind prevails across the upper country while hot to very hot weather are in the upper country.

For the South, during 2 – 5 May 2026, the easterly and the southerly winds prevails the South with more rains. The winds and waves in the Gulf are expected about 1 meter high and above 1 meters high in thundershowers. **During 6 – 8 May 2026**, the easterly wave will move pass the lower South with heavy rains. The winds and waves in the Gulf are expected about 1 meter high and above 2 meters high in thundershowers.

Warning: People in the upper country should beware of severe conditions and keep healthy due hot to very hot weather **throughout the period.**

During 6 – 7 May 2026, people in the lower South should beware of heavy to very heavy rain and accumulation that may cause flash floods and overflows especially along the waterways near foothills and lowlands.

The weather forecast is valid from Saturday this week until Friday next week
