

Emerging signals of ENSO-driven precipitation anomalies under climate change

Chalump Oonariya, PhD
Climate Center, Thai Meteorological Department

World Meteorological Day 2025
“Closing the Early Warning Gap Together”

Table of Contents

- ① Early Warning and Planning of Climate Forecasting System
- ② Global Impacts of Climate Phenomena
- ③ Eigenvector of Global SST and Precipitation
- ④ Intuitive view of Canonical Correlation Analysis
- ⑤ FFT and Wavelet Power Spectrum of PDO & ENSO
- ⑥ CCA Calibration and Downscaling
 - Linear methods and Error minimization
 - CCA Experiments for Calibration and Downscaling
 - NMME 7+1 Models Sea Surface Temperature Patterns
- ⑦ Multi-Model Ensemble on the Probabilistic Forecast
- ⑧ Emerging signals of Climate Change to SST Evolution
- ⑨ Changing of El Nino Patterns, Changing Impact
- ⑩ Performing of Empirical Orthogonal Function (EOFs)
- ⑪ Emerging of Basin Wide Warming
- ⑫ Discussions

Table of Contents

Global Impacts of Climate Phenomena

Pacific Decadal Oscillation (PDO)

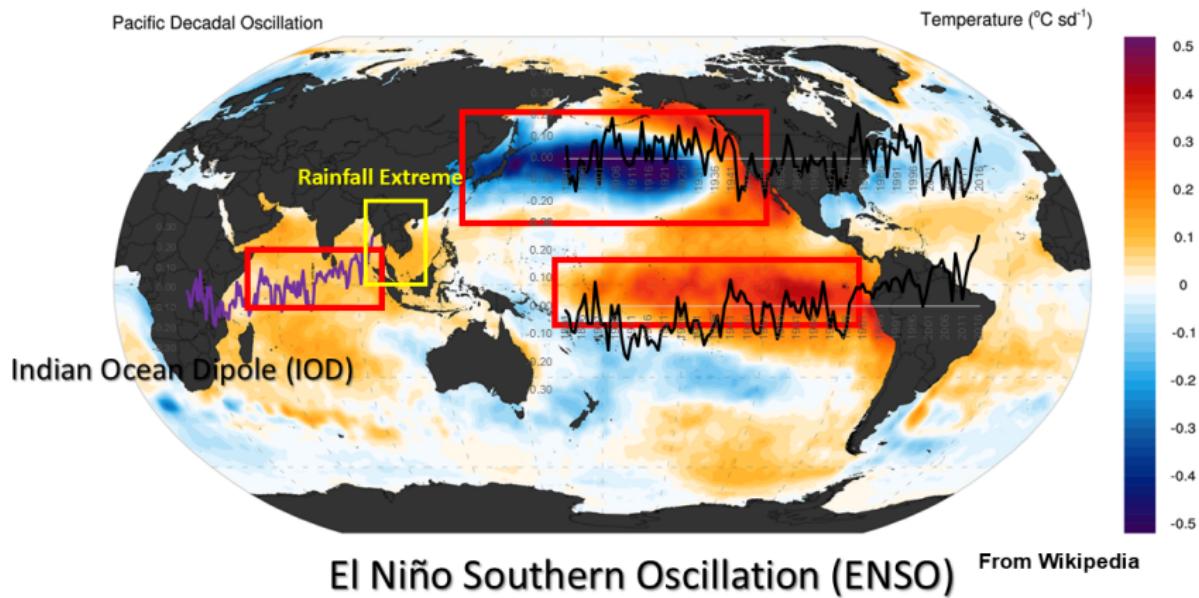

Table of Contents

- ① Early Warning and Planning of Climate Forecasting System
- ② Global Impacts of Climate Phenomena
- ③ Eigenvector of Global SST and Precipitation
- ④ Intuitive view of Canonical Correlation Analysis
- ⑤ FFT and Wavelet Power Spectrum of PDO & ENSO
- ⑥ CCA Calibration and Downscaling
 - Linear methods and Error minimization
 - CCA Experiments for Calibration and Downscaling
 - NMME 7+1 Models Sea Surface Temperature Patterns
- ⑦ Multi-Model Ensemble on the Probabilistic Forecast
- ⑧ Emerging signals of Climate Change to SST Evolution
- ⑨ Changing of El Nino Patterns, Changing Impact
- ⑩ Performing of Empirical Orthogonal Function (EOFs)
- ⑪ Emerging of Basin Wide Warming
- ⑫ Discussions

Eigenvector of Global SST and Precipitation

Preliminary results from CCA (Period: 1891-2016)

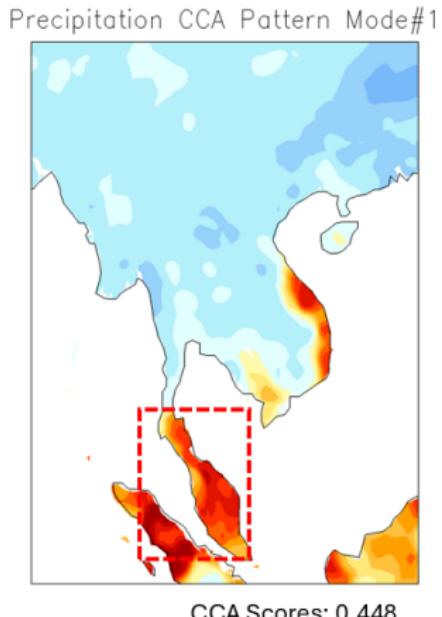

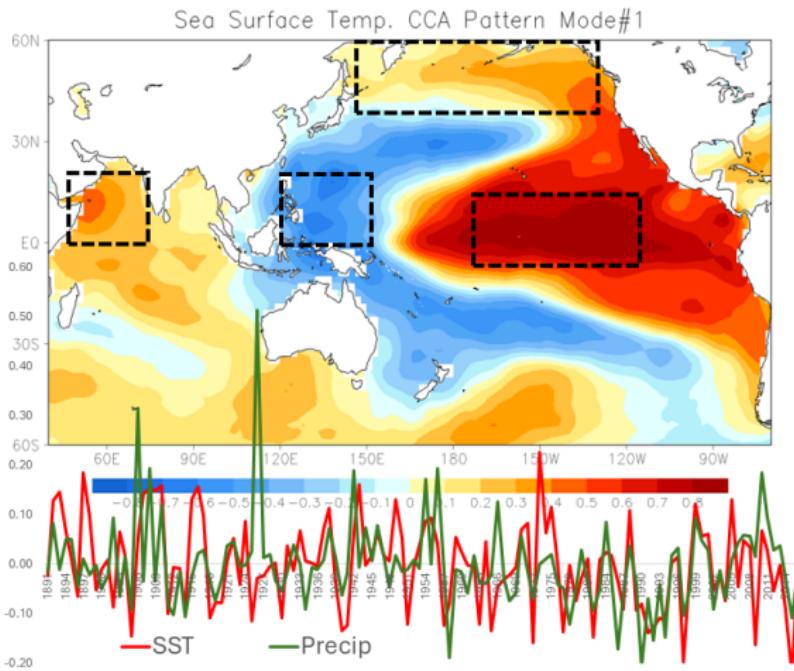

Table of Contents

- ① Early Warning and Planning of Climate Forecasting System
- ② Global Impacts of Climate Phenomena
- ③ Eigenvector of Global SST and Precipitation
- ④ Intuitive view of Canonical Correlation Analysis
- ⑤ FFT and Wavelet Power Spectrum of PDO & ENSO
- ⑥ CCA Calibration and Downscaling
 - Linear methods and Error minimization
 - CCA Experiments for Calibration and Downscaling
 - NMME 7+1 Models Sea Surface Temperature Patterns
- ⑦ Multi-Model Ensemble on the Probabilistic Forecast
- ⑧ Emerging signals of Climate Change to SST Evolution
- ⑨ Changing of El Nino Patterns, Changing Impact
- ⑩ Performing of Empirical Orthogonal Function (EOFs)
- ⑪ Emerging of Basin Wide Warming
- ⑫ Discussions

Intuitive view of Canonical Correlation Analysis

Two time series $X(t)$ and $Y(t)$. The correlation between $\langle X, Y \rangle = corr$

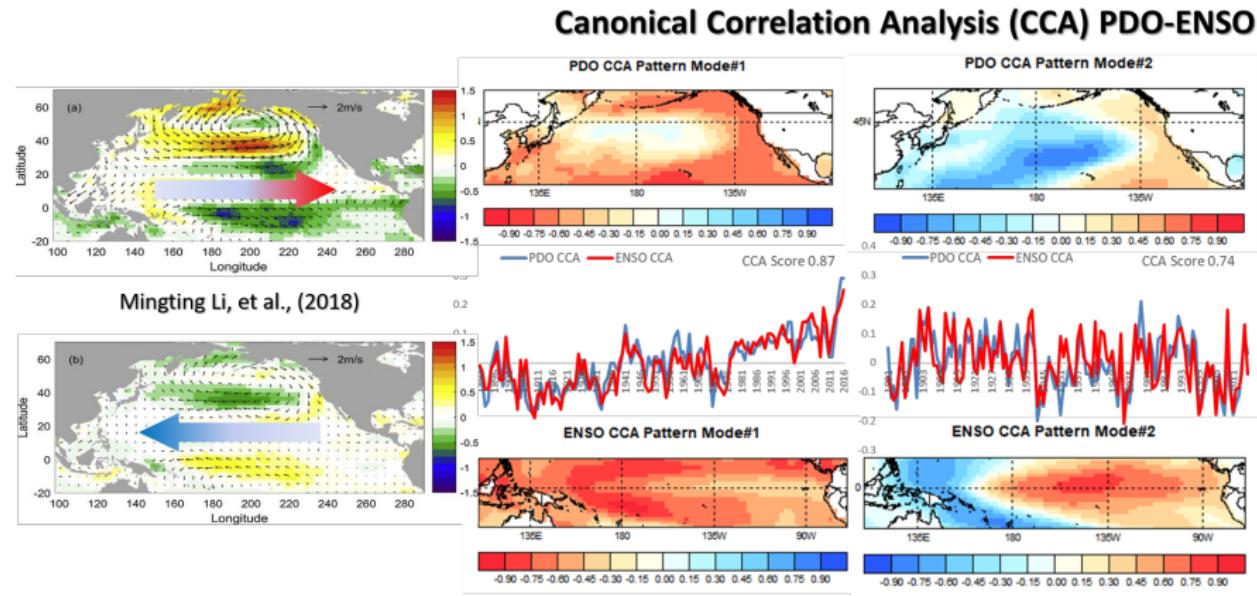

Table of Contents

- ① Early Warning and Planning of Climate Forecasting System
- ② Global Impacts of Climate Phenomena
- ③ Eigenvector of Global SST and Precipitation
- ④ Intuitive view of Canonical Correlation Analysis
- ⑤ FFT and Wavelet Power Spectrum of PDO & ENSO
- ⑥ CCA Calibration and Downscaling
 - Linear methods and Error minimization
 - CCA Experiments for Calibration and Downscaling
 - NMME 7+1 Models Sea Surface Temperature Patterns
- ⑦ Multi-Model Ensemble on the Probabilistic Forecast
- ⑧ Emerging signals of Climate Change to SST Evolution
- ⑨ Changing of El Nino Patterns, Changing Impact
- ⑩ Performing of Empirical Orthogonal Function (EOFs)
- ⑪ Emerging of Basin Wide Warming
- ⑫ Discussions

FFT and Wavelet Power Spectrum of PDO & ENSO

**Warm(Cool) phase PDO keeps ENSO staying longer-live and more intense
(Luiz Carlos B. 2013)**

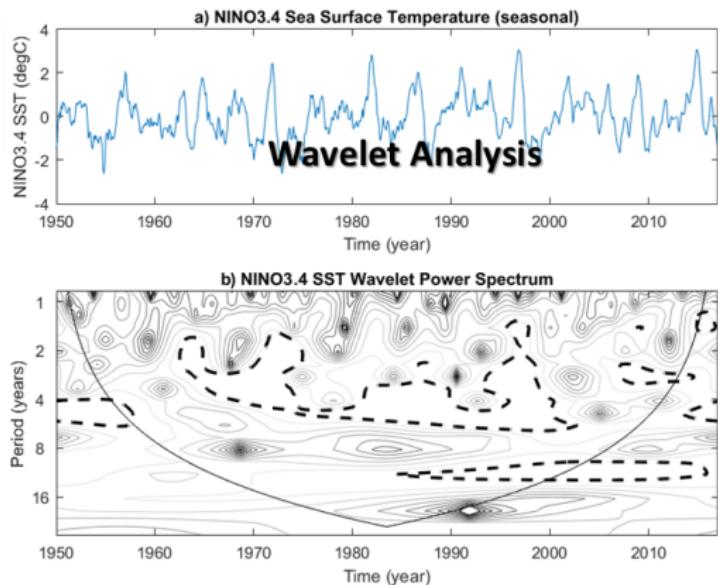

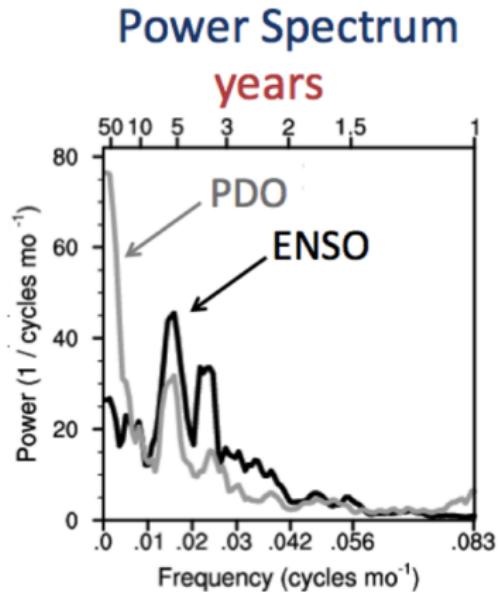

Table of Contents

- ① Early Warning and Planning of Climate Forecasting System
- ② Global Impacts of Climate Phenomena
- ③ Eigenvector of Global SST and Precipitation
- ④ Intuitive view of Canonical Correlation Analysis
- ⑤ FFT and Wavelet Power Spectrum of PDO & ENSO
- ⑥ CCA Calibration and Downscaling
 - Linear methods and Error minimization
 - CCA Experiments for Calibration and Downscaling
 - NMME 7+1 Models Sea Surface Temperature Patterns
- ⑦ Multi-Model Ensemble on the Probabilistic Forecast
- ⑧ Emerging signals of Climate Change to SST Evolution
- ⑨ Changing of El Nino Patterns, Changing Impact
- ⑩ Performing of Empirical Orthogonal Function (EOFs)
- ⑪ Emerging of Basin Wide Warming
- ⑫ Discussions

Canonical Correlation Analysis as downscaling method

Index-based representation of observed fields

$$X(i, t) = \sum \alpha_k(t) p_k(i) = \alpha_1(t) p_1(i) + \alpha_2(t) p_2(i) + \dots$$

$$Y(i, t) = \sum \beta_k(t) q_k(i) = \beta_1(t) q_1(i) + \beta_2(t) q_2(i) + \dots$$

Linear Algebra

we have estimated p and q already.

By estimating the α and following the β

$$\beta_i = r_i \alpha_i$$

Linear methods and Error minimization

Linear methods: by minimizing the sum of squares

$$Error = \sum_{t,i} \left[X(i, t) - \sum_k \alpha_k(t) p_k(i) \right]^2$$

Zorita and Storch, 1998

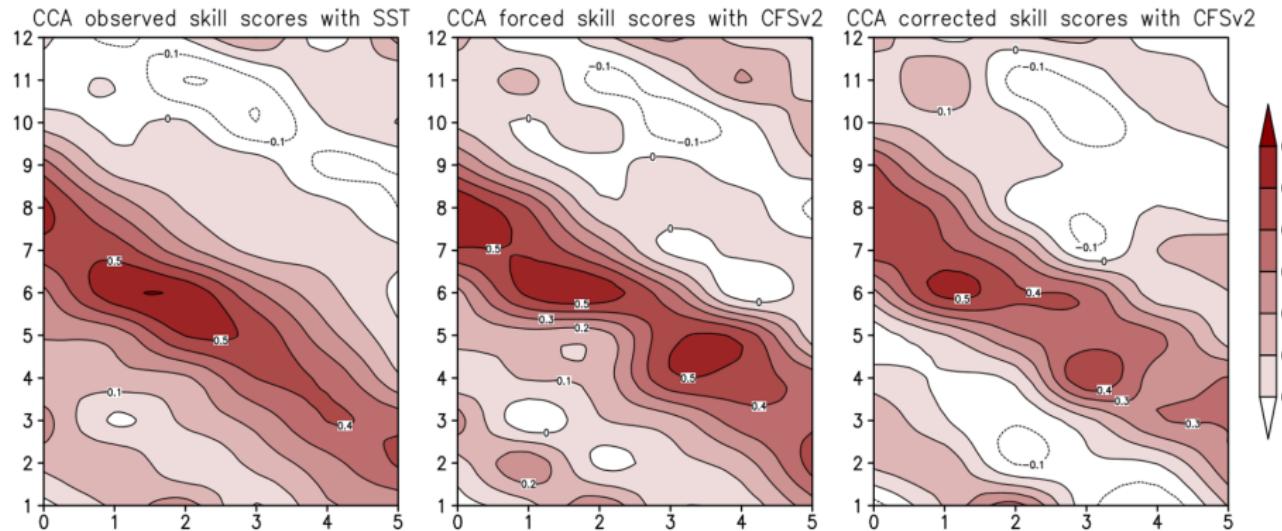

the solution become

Reconstruction Y

$$Y(i, t) = \sum \beta_k q_k = \beta_1(t) q_1(i) + \beta_2(t) q_2(i)$$

CCA Experiments for Calibration and Downscaling

Three Experiments performed the CCA Calibration and Downscaling

NMME 7+1 Models Sea Surface Temperature Patterns

Sea Surface Temperature Patterns

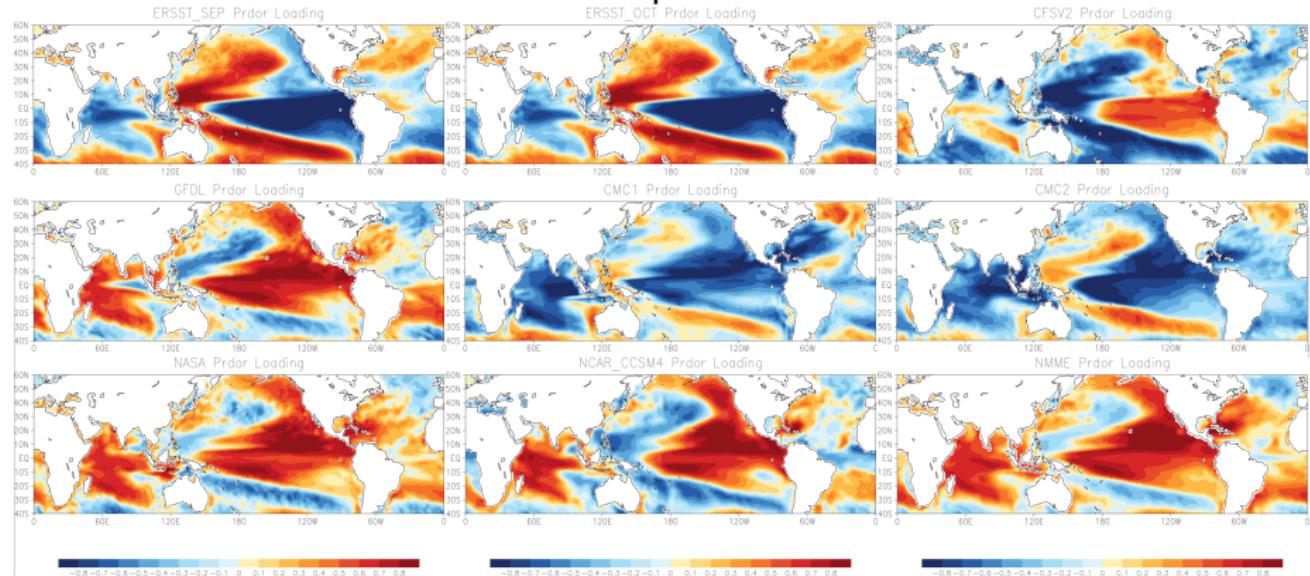

Table of Contents

- ① Early Warning and Planning of Climate Forecasting System
- ② Global Impacts of Climate Phenomena
- ③ Eigenvector of Global SST and Precipitation
- ④ Intuitive view of Canonical Correlation Analysis
- ⑤ FFT and Wavelet Power Spectrum of PDO & ENSO
- ⑥ CCA Calibration and Downscaling
 - Linear methods and Error minimization
 - CCA Experiments for Calibration and Downscaling

Emerging signals of Climate Change to SST Evolution

Evolution of weekly SSTA patterns

SST Anomalies (degree Celsius)

ENSO Indices

- Based on observed SST anomalies (difference from the long-term mean) in the equatorial Pacific in **four** regions (observation from TAO moored buoys)
- Based on surface pressure differences between Tahiti and (minus) Darwin, called the Southern Oscillation Index (SOI)
- Nino 5 index reveals a global warming signal and changing of ENSO impact

Table of Contents

- ① Early Warning and Planning of Climate Forecasting System
- ② Global Impacts of Climate Phenomena
- ③ Eigenvector of Global SST and Precipitation
- ④ Intuitive view of Canonical Correlation Analysis
- ⑤ FFT and Wavelet Power Spectrum of PDO & ENSO
- ⑥ CCA Calibration and Downscaling
 - Linear methods and Error minimization
 - CCA Experiments for Calibration and Downscaling
 - NMME 7+1 Models Sea Surface Temperature Patterns
- ⑦ Multi-Model Ensemble on the Probabilistic Forecast
- ⑧ Emerging signals of Climate Change to SST Evolution
- ⑨ **Changing of El Nino Patterns, Changing Impact**
- ⑩ Performing of Empirical Orthogonal Function (EOFs)
- ⑪ Emerging of Basin Wide Warming
- ⑫ Discussions

Changing of El Nino Patterns, Changing Impact

Changing of El Nino patterns, Changing Impact

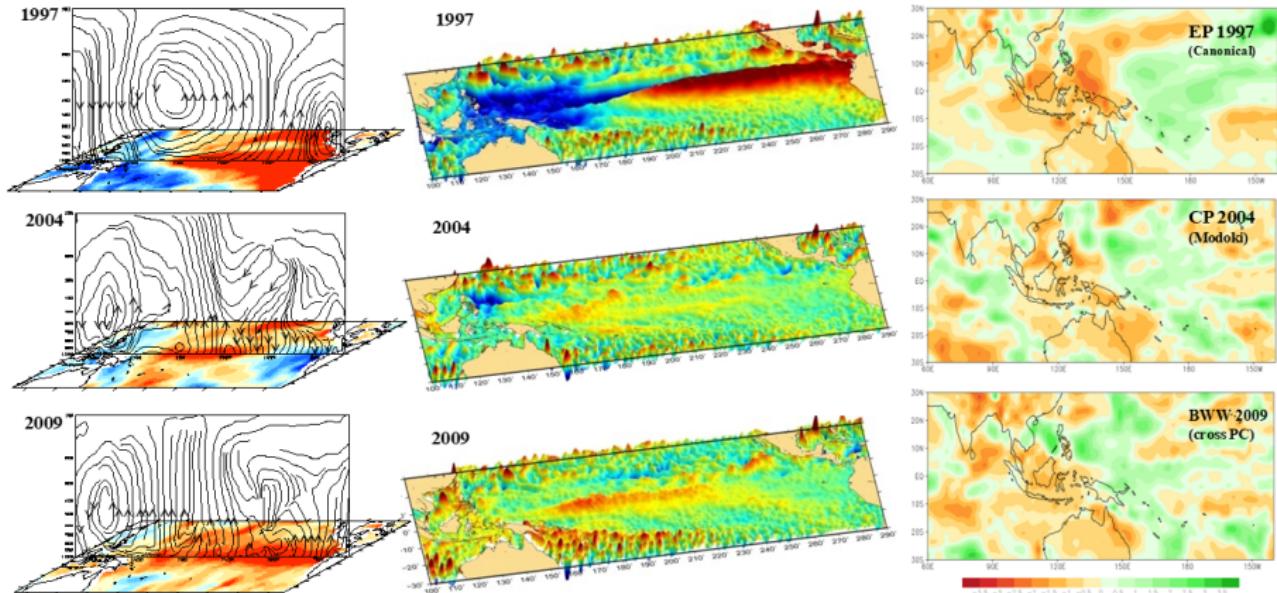

Table of Contents

- ① Early Warning and Planning of Climate Forecasting System
- ② Global Impacts of Climate Phenomena
- ③ Eigenvector of Global SST and Precipitation
- ④ Intuitive view of Canonical Correlation Analysis
- ⑤ FFT and Wavelet Power Spectrum of PDO & ENSO
- ⑥ CCA Calibration and Downscaling

- ⑫ Discussions

Performing of Empirical Orthogonal Function (EOFs)

Empirical Orthogonal Function (EOFs) of SST anomalies

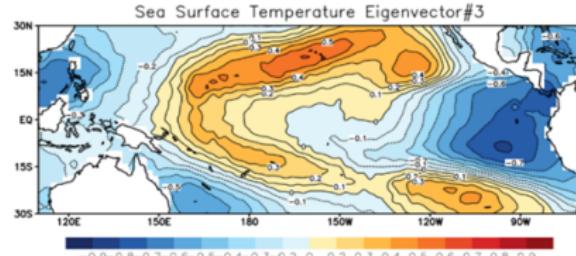

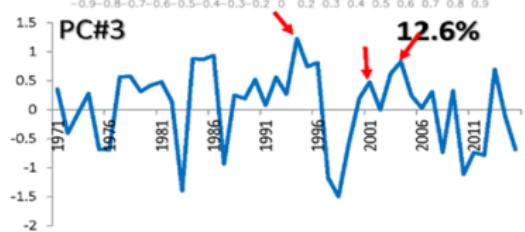

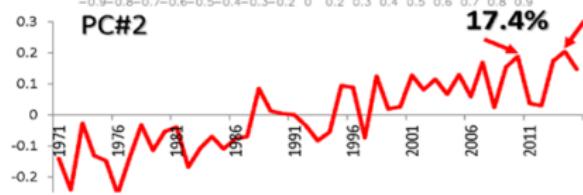

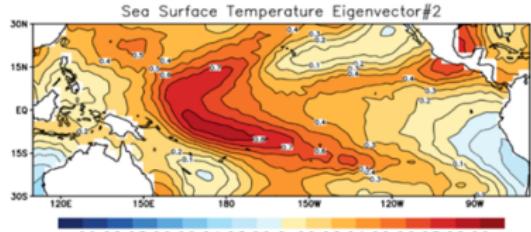

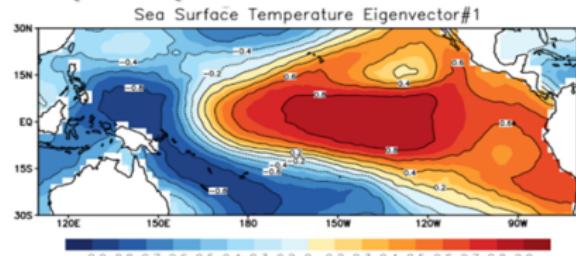

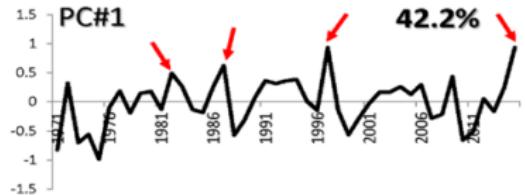

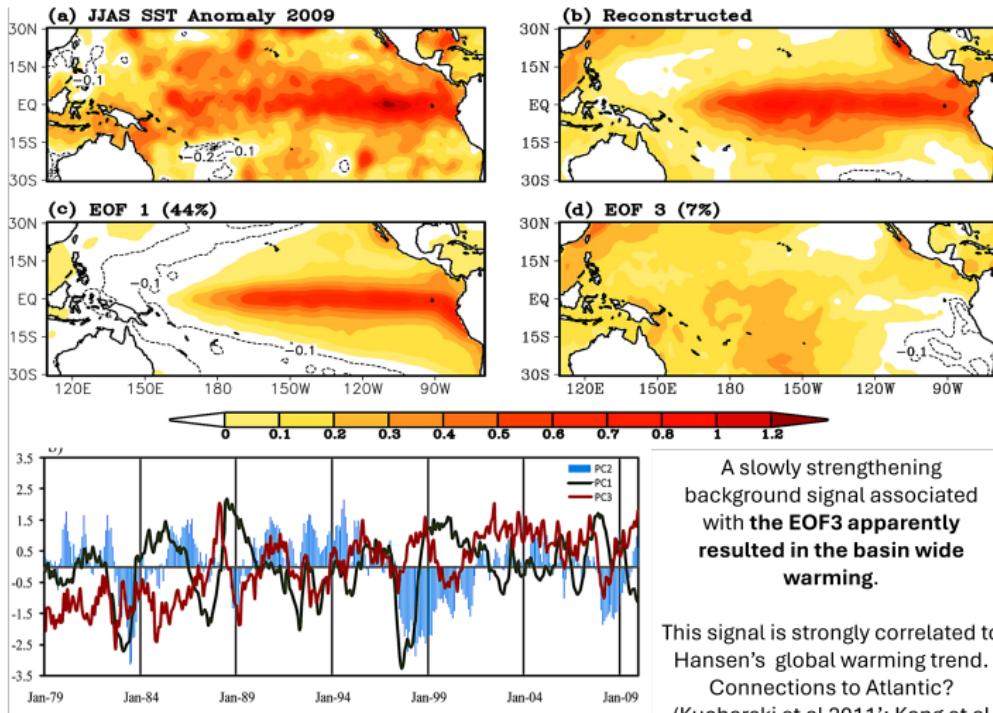

Table of Contents

- ① Early Warning and Planning of Climate Forecasting System
- ② Global Impacts of Climate Phenomena
- ③ Eigenvector of Global SST and Precipitation
- ④ Intuitive view of Canonical Correlation Analysis
- ⑤ FFT and Wavelet Power Spectrum of PDO & ENSO
- ⑥ CCA Calibration and Downscaling
 - Linear methods and Error minimization
 - CCA Experiments for Calibration and Downscaling
 - NMME 7+1 Models Sea Surface Temperature Patterns
- ⑦ Multi-Model Ensemble on the Probabilistic Forecast
- ⑧ Emerging signals of Climate Change to SST Evolution
- ⑨ Changing of El Nino Patterns, Changing Impact
- ⑩ Performing of Empirical Orthogonal Function (EOFs)
- ⑪ Emerging of Basin Wide Warming
- ⑫ Discussions

Emerging of Basin Wide Warming

EOF analysis of the observed tropical Pacific interannual SSTAs (1979–2009). ** The sign of PC1 has been inadvertently changed **

Table of Contents

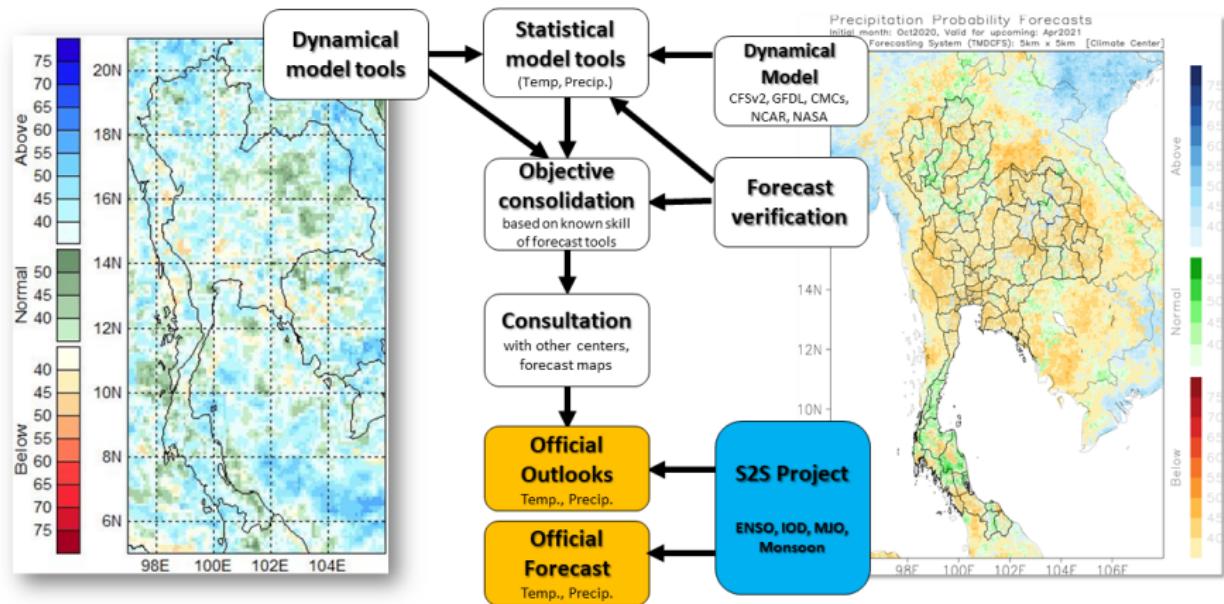

- ① Early Warning and Planning of Climate Forecasting System
- ② Global Impacts of Climate Phenomena
- ③ Eigenvector of Global SST and Precipitation
- ④ Intuitive view of Canonical Correlation Analysis
- ⑤ FFT and Wavelet Power Spectrum of PDO & ENSO
- ⑥ CCA Calibration and Downscaling
 - Linear methods and Error minimization
 - CCA Experiments for Calibration and Downscaling
 - NMME 7+1 Models Sea Surface Temperature Patterns
- ⑦ Multi-Model Ensemble on the Probabilistic Forecast
- ⑧ Emerging signals of Climate Change to SST Evolution
- ⑨ Changing of El Nino Patterns, Changing Impact
- ⑩ Performing of Empirical Orthogonal Function (EOFs)
- ⑪ Emerging of Basin Wide Warming
- ⑫ Discussions

Discussions

- ① The EOF analysis reveals that a few leading modes captured about 72% of the first EOF depicts east Pacific SST anomalies (42.2%), the second mode depicts across Pacific SST anomalies (17.4%), and the third mode depicts central Pacific SST anomalies.
- ② The Niño5 region reveals a signal of west Pacific SST anomalies triggering an across-Pacific El Niño type under global warming.
- ③ Both tropical basins and extra-tropical teleconnections have contributed to producing drought/deficit rainfall over the Indochina Peninsula region.
- ④ The SST anomalies over the tropical Pacific have modulated the Walker cell and, in turn, the Hadley cell, leading to tropical interconnections that impact the Asian monsoon season.
